For Immediate Release

Remark Classic OMR[®] 3.0 Brings a Wide Selection of New Features and Reporting Options

Malvern, PA – June 1, 2006 – On June 1st, Gravic’s Remark Products Group, formerly known as Principia Products, a leading producer of scanning and web software solutions for survey, test and forms data collection, introduced a new major release of Remark Classic OMR.

Remark Classic OMR is a Windows software package that gives users the ability to scan pre-printed forms using traditional OMR scanners offered through widely-used manufacturers such as Pearson Assessments and Chatsworth Data. These scanners quickly read pre-printed OMR (“fill in the bubble”) forms in many schools and businesses. When driven by Remark Classic OMR, these scanners read in completed bubbles and can save the data in an electronic format. The software can grade tests and tabulate survey results, provide sophisticated data analysis and graphs, or export data to many commonly used formats, making the it compatible with most outside analysis programs and databases. Schools, training or testing services, researchers, large companies, and government agencies commonly use this system to process high volumes of tests, surveys, or other forms.

The new version of Remark Classic OMR includes a robust new version of Remark Quick Stats[®], a built-in reporting feature, which offers sophisticated analysis for both surveys and tests. Reports come with new options for question weighting, question grouping, and benchmarking for questions or groups of questions. When scanning tests, users can create reports with custom learning objectives, so they now have a powerful tool to assure

compliance with the No Child Left Behind Act. The ability to tie test questions to specific learning objectives gives instructors and administrators a way to measure student, class, and school performance against state standards. Other major enhancements include a new Grade and Print mode where compatible scanners can print a grade on a form as it is being scanned, new Self Score support for Pearson Assessment scanners, a new export to the popular Questionmark online testing product, crosstabulations, and greater customization. Please see www.gravic.com/RemarkClassicOMR for complete details.
